

CASE STUDY

PROJECT DETAILS

Project Name:

Lewiston Boulevard
Residence

Location:

Hastings, MN

Contractor:

Nature's Quest
Landscape and Design

Products Used:

Essence® Wood Grain
Plank Pavers, Summit
Stone® Landscape Units

Durable Concrete Landscape Products Blend Functionality and Rustic Charm on Minnesota Farm

Solutions: Concrete pavers with wood grain textures create inviting backyard living space

Concrete landscape products manufactured by County Materials transformed a Minnesota farmyard into a stunning outdoor living and kitchen space.

The homeowners sought products that would match the rustic setting of their farmhouse but require minimal maintenance. Essence Wood Grain Plank Pavers, which come in five different plank lengths and feature authentic-looking grain and textures found in weathered wood, proved ideal for this 2,000-square-foot patio and outdoor living area. The pavers create a handcrafted effect while offering the unmatched durability of concrete.

Summit Stone Landscape Units were also used to build a bar with a built-in wood-fired oven, an island, and a fire pit.

Continued on page 2.

Concrete landscape products are designed to last and well suited to the climate of the Upper Midwest. Essence pavers resist wear from foot traffic and withstand the freeze/thaw cycles of the winter months without losing their distinctive appearance. Manufactured in a wide variety of colors, finishes, and unit sizes, Summit Stone Landscape Units offer unlimited design flexibility for outdoor living spaces.

The patio project involved excavation of the backyard, laying a stable base, and installing pavers and free standing walls to create the outdoor kitchen features. County Materials' readily available materials helped get the project done in just four months. The homeowners were pleased with the results and look forward to many years of enjoying their patio.
