Neil's Outdoor Services

Product Manufacturer:

County Materials

Date:

2021

County Materials' Landscape Products Create Stunning Pool Deck

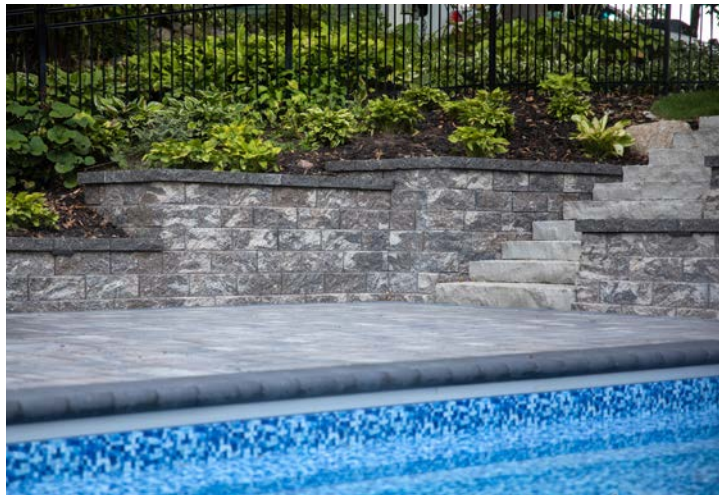

Solutions: Permeable pavers and a retaining wall system turn sloping yard into a poolside oasis

The owners of this property sought to transform their underutilized sloping backyard into a sleek, functional poolside oasis. Durability and design flexibility were primary considerations in their product selection process. Working with their contractor, the homeowners chose concrete landscape products manufactured by County Materials.

County Materials uses Genesis® Face-Mix Technology to manufacture integrally colored pavers that endure weather and resist wear. The homeowners selected Crest Bullnose Pavers, Grand Discover Pavers, and Elements Paving Stones in darker colors to achieve a modern aesthetic.

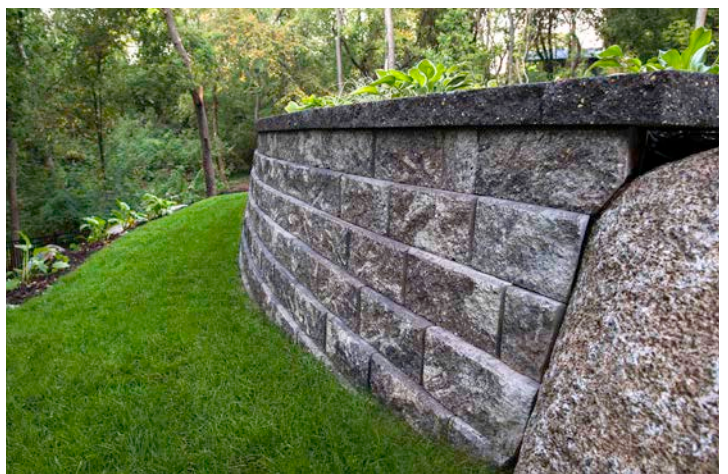

Continued on page 2.

Because of the property's slope, the contractor opted for permeable H₂O Pro Pavers for the pool deck. The permeable pavers' moody color blend creates a striking contrast with the pool's bright blue liner and the yard's lush landscaping.

Using locally and readily available products, the project was completed within three weeks. More than 1,500 SF of pavers and 750 SF of Tribute 2.0 Retaining Wall units were installed, creating a stunning outdoor living space the homeowners can enjoy for many seasons.

County Materials uses Genesis® Face-Mix Technology to manufacture integrally colored pavers that endure weather and resist wear.
