Pavers, Discover® Pavers,
Elements™ Paving Stones

Contractor:

Earthworks Landscaping

Product Manufacturer:

County Materials
Corporation

Concrete Pavers Offer Dimension and Durability to Homeowners' Driveway and Pool Deck

Solutions: Versatile and long-lasting concrete landscape products chosen for driveway and pool transformation

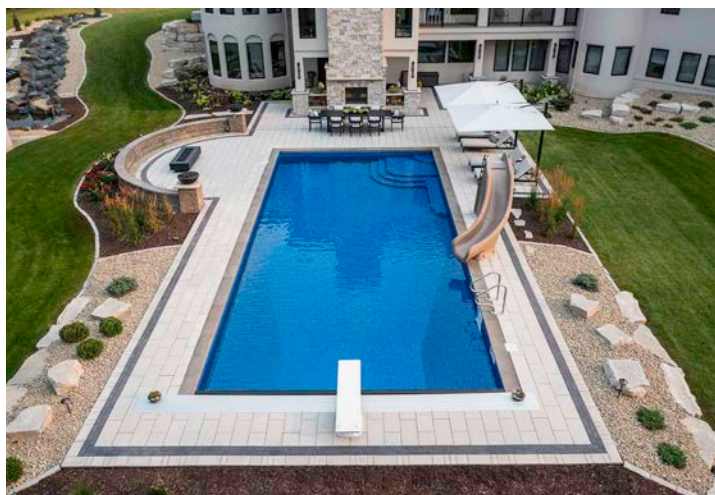

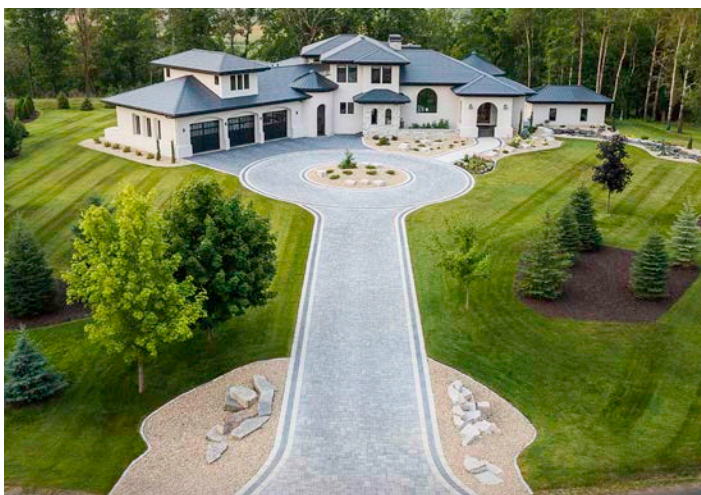

After building their home, homeowners in Hudson, Wisconsin, sought out versatile and long-lasting landscape products to construct their driveway and pool deck. They were drawn to the clean aesthetics of concrete pavers manufactured by County Materials and selected three types of pavers to transform their property.

Discover Pavers in Majestic were used to form a circular driveway leading up to the house. Complementary Elements pavers in two contrasting colors formed a border around the driveway, as well as a wide, appealing pathway to the front door. The combination of colors and shapes offer dimension and curb appeal to the entrance of the home.

For their pool deck, the homeowners chose two colors and sizes of pavers. The extra-long Grand Discover XL pavers in Vision were used for the main pool deck, with a border made of Elements Paving Stones in Reflection. The two-tone effect complements the various outdoor entertainment elements within the space.

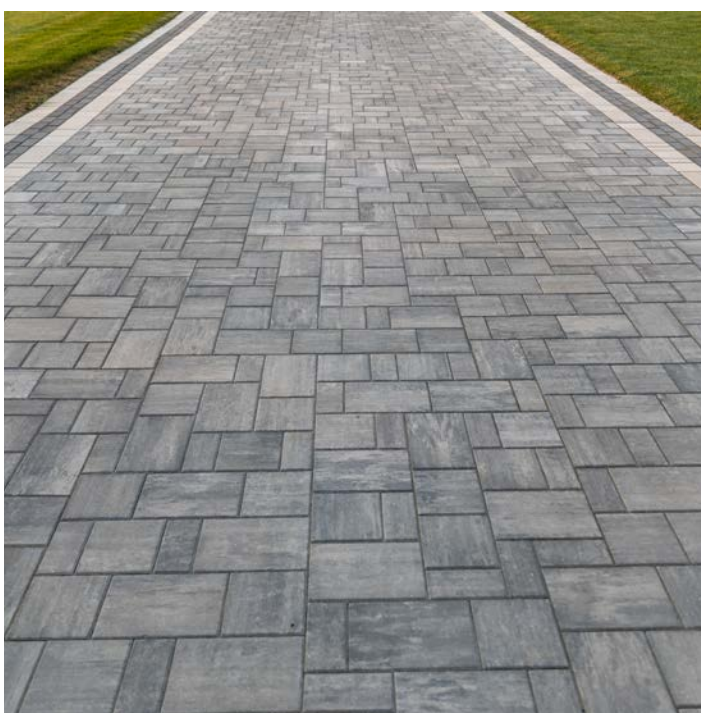

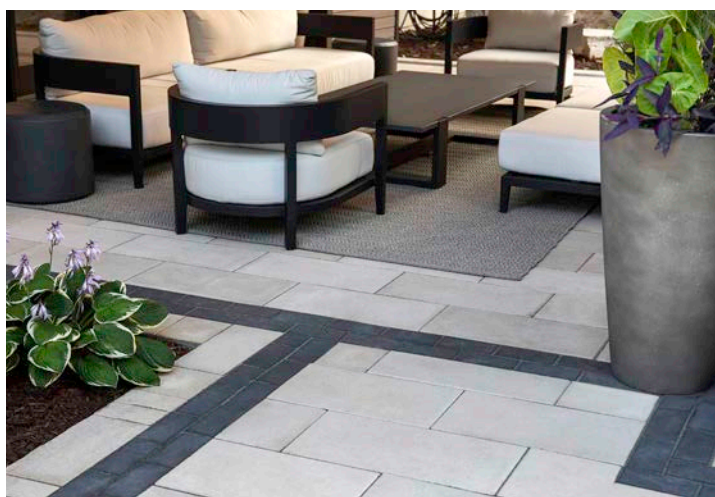

Continued on page 2.

Within five weeks, more than 7,000 square feet of concrete pavers were installed to create the driveway and backyard pool deck.

Concrete pavers are a durable material that resists weathering and wear in high traffic areas. Providing unmatched strength, concrete landscaping materials can resist the elements and freeze/thaw cycles and achieve prolonged service life. The versatility and variety of colors, shapes, and sizes of County Materials' concrete pavers allowed these homeowners to create a stunning driveway entrance and functional backyard space they will enjoy for years.
