

## CASE STUDY

### PROJECT DETAILS

**Project Name:**

Indianapolis Central  
Logistics Park Building 1

**Location:**

Indianapolis, IN

**Project Owner:**

AOZI Brookfield Building  
1, LLC.

**Project Architect:**

Curran Architects

**Project Engineer:**

Smith/Roberts &  
Associated, Inc.

**Project Contractor:**

Compass Commercial  
Construction Group

**Project Erector:**

Sealed-Rite Inc.

**Date:**

2021

**Key Products:**

Insulated Sandwich Walls

## County Prestress' Insulated Sandwich Walls Offer Significant Time and Cost Savings

**Solutions:** Prestressed wall panels promote ease and speed of installation

The Indianapolis Central Logistics Park was built to keep pace with the growing demand for warehouses in Central Indiana. Project leaders sought efficient building materials with an unmatched service life to complete the project on schedule.

County Prestress' Insulated Sandwich Walls were specified for their structural benefits and availability. Insulated Sandwich Walls offer reliable durability and can resist fire, wind, and forklift damage. The panels are comprised of two concrete panels that enclose a layer of insulation. With enhanced thermal properties, ISWs absorb and release heat to reduce peak energy consumption and offer significant energy and cost savings throughout their extended service life.

*Continued on page 2.*

County Prestress' Insulated Sandwich Walls are manufactured to specification and arrive on site ready for erection. Prestressed panels promote ease and speed of installation, meeting tight construction schedules and allowing trades earlier access.

More than 160,000 SF of insulated sandwich walls were manufactured and delivered by County Prestress. The panels provided a timely and efficient building solution. Use County Prestress' Insulated Sandwich Walls for your next project by contacting our team at (708) 562-7700.
