## Innovative Solutions for Modern Parking Structures and Commercial Buildings

Commercial buildings and parking structures are demanding greater durability, design flexibility, and efficiency than ever before. Engineers rely on prestressed concrete to meet short construction schedules, overcome site challenges, and endure harsh conditions.

Prestressed concrete offers many advantages. Unlike cast-in-place applications, which can face delays due to weather, prestressed structural components are manufactured to specification in a climate-controlled environment. Precast fabrication also minimizes site disturbance and allows for unmatched speed of installation. Their high load capacities allow for fewer columns, maximizing usable space with long, open parking bays.

Prestressed concrete withstands natural and manmade impacts over an extended service life and is one of the strongest, most resilient building materials available. Resistant to fire, rot, and corrosion, prestressed parking structure components can endure decades of weather and wear.

County Prestress & Precast manufactures high performing prestressed concrete double tees, columns and beams, spandrels, shear walls, and architectural wall panels for design-focused parking structures. With double tees up to 15' wide, our prestressed components are longer and wider than the industry average.

Our commitment to advancing this material is expanding the possibilities of parking structures.

Prestressed Concrete Double Tees

Precast Columns and Beams

Stairs

Insulated Wall Panels

## Our Prestressed Components

- Meet project specifications and applicable building codes
- Support high load capacities
- Form long, open parking bays
- Increase design flexibility
- Lower life cycle cost
- Resist natural and manmade elements
- Minimize site disturbance
- Accelerate construction schedules

## Design and Engineering Experience

Our experienced Engineering Team partners with you from design to the coordination of production, delivery, and erection schedules. We work with you to prepare submittal drawings that ensure you get the safest and most reliable and aesthetically pleasing product.

## Your Full-Service Partner

Construction professionals rely on County Prestress & Precast to support them through every phase of construction, utilizing the highest quality prestressed products. Our team delivers satisfactory results by performing extensive quality assurance tests before, during, and after casting. County Prestress & Precast helps make the difficult projects simple.
