**(800) 242-7733**  
**countymaterials.com**

Omni Block is an insulated structural wall system that offers exceptional thermal performance.

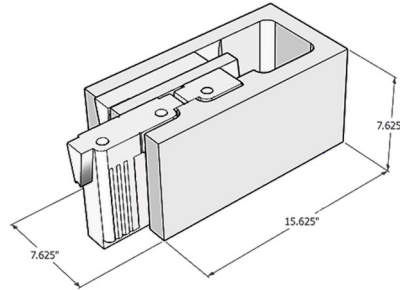

Manufactured with multiple layers of masonry and Expanded Polystyrene (EPS) foam inserts, these insulated concrete blocks inhibit the flow of heat and offer enhanced strength compared to traditional concrete masonry units. While no additional insulation or sheetrock is required for structural or thermal performance, Omni Block can be polished, scored, split, stained, or covered with any veneer for aesthetic purposes.

Combining the benefits of concrete masonry with the thermal performance of EPS insulation, Omni Block is an ideal standalone wall system for any climate controlled building.

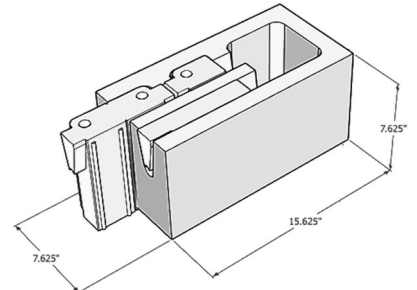

### Omni Block Advantages

- Omni Block meets or exceeds all masonry structural requirements
- Low U-factor and high R-value
- Versatile finish options
- Resistant to wind, fire, pests, and mold
- Low maintenance costs

more about this product

Refer to the County Materials Masonry Guide for additional size, shapes and standard color options.

The color photos shown were prepared with careful attention to accuracy. However, colors shown may vary from actual hues and should only be used as a guide. Refer to actual product samples for final color selection. Because concrete units are manufactured with high quality, naturally-mined aggregates and materials, variation in color or shading should be expected in products that are manufactured at different times and in units having different shapes. This color or shading variation is acceptable in the industry.

Note: Letter following color name denotes pricing level. Colors, product data, and availability are subject to change without notice. Please confirm all details with a County Materials representative for availability in your area.
