

SECTION 04 22 0

CONCRETE UNIT MASONRY

SECTION 04220 ARCHITECTURAL CONCRETE UNIT MASONRY

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

- 1 Concrete Masonry Units
 - 1. Split Face architectural concrete masonry units
 - 2. Premier Ultra Burnished architectural concrete masonry units
 - 3. Heritage Collection Designer Concrete Brick architectural concrete masonry units
 - 4. Scored Smooth architectural concrete masonry units
 - 5. Transplit Block architectural concrete masonry units
 - 6. Wirecut Block architectural concrete masonry units
 - 7. Reflection Brick architectural concrete masonry units
 - 8. Reflection Stone architectural concrete masonry units
 - 9. Reflection Grand architectural concrete masonry units
 - 10. County Stone architectural concrete masonry units

2 Concrete Thin Veneers:

- 1. **Split Face** architectural concrete masonry units
- 2. Premier Ultra Burnished architectural concrete masonry units
- 3. Heritage Collection Designer Concrete Brick architectural concrete masonry units
- 4. Reflection Brick architectural concrete masonry units
- 5. Reflection Stone architectural concrete masonry units
- 6. Reflection Grand architectural concrete masonry units
- 7. County Stone architectural concrete masonry units

B. Related Sections:

- 1. Section 04060 Masonry Mortaring
- 2. Section 04070 Masonry Grout

- 3. Section 04080 Masonry Anchorage and Reinforcement
- 4. Section 04090 Masonry Accessories
- 5. Section 05120 Structural Steel Framing
- 6. Section 05500 Metal Fabrications
- 7. Section 07190 Water Repellants
- 6. Section 07900 Joint Protection

1.2 REFERENCES

- A. American Concrete Institute (ACI):
 - ACI 117 Standard Specifications for Tolerances for Concrete Construction and Materials.
 - 2. ACI 530 Building Code Requirements for Masonry Structures.
 - 3. ACI 530.1 Specification for Masonry Structures.
- B. American Society for Testing and Materials (ASTM):
 - 1. ASTM C 270 Standard Specification for Mortar for Unit Masonry
 - 2. ASTM C 90 Specification for Load-bearing Concrete Masonry Units 3. ASTM C 140 Methods of Sampling and Testing Concrete Masonry Units.
 - 4. ASTM E 514 Standard Test Method for Water Penetration and Leakage Through Masonry

1.3 SUBMITTALS

- A. Specified in Section 01330 -Submittal Procedures
- B. Color Selection
 - 1. For Initial Selection: Unit masonry sample box-sized samples showing the full range of colors and textures available for each different exposed masonry unit required
 - 2. For Verification Purposes: Full-size units or full-face shells showing the full range of colors and textures expected in the completed project

1.4 QUALITY ASSURANCE

- A. Construction: Construct masonry in accordance with requirements of ACI 530 and 530.1.
- B. Special Inspection and Testing: Provide inspection and testing in accordance with the Building Code and as noted on Drawings and will be performed under provisions of Section 01450.
- C. Mock-up: Construct a masonry wall mock-up panel to represent the selected exterior masonry wall color, texture characteristics, and bond pattern.
 - 1. Construct wall at least 4 feet long by 4 feet high.
 - 2. Locate where directed by Architect/Owner's Representative.
 - 3. Include bond pattern, joint profile and mortar colors for all face textures and colors.
 - 4. Include reinforcement, flashing and weeps as indicated on drawings.

- 5. Erect entire mock-up with methods representative of standard, daily construction, and in-progress cleaning practices.
- 6. Mock-up sample panel must receive acceptance by Architect/Owner's Representative before proceeding with masonry installation.
- 7. Once accepted, mock-up sample panel will be used as the standard of quality for masonry work on the project.
- 8. Leave mock-up sample panel in place until project completion.

1.5. DELIVERY, STORAGE AND HANDLING

- A. Deliver and handle architectural masonry materials as to prevent damage
 - 1. Deliver architectural masonry units wrapped and on wooden pallets
 - 2. Cover stacked masonry units with protective waterproof covering that will allow air circulation between blocks and pallets to prevent excessive moisture accumulation
 - 3. Ground and Polished Face masonry units to be packaged with protective foam membrane between block layers to minimize chipping.
- B. Store architectural masonry units in a location as to minimize handling, exposure to excessive moisture, contaminants, corrosion, and materials that could cause staining.
- C. Store mortar materials off the ground with waterproof covering and in a dry location

1.6. PROJECT CONDITIONS

A. Environmental Requirements (**Cold Weather**): Follow the requirements for Hot and Cold Weather Construction.

Include the following construction requirements for cold weather procedures:

- 1. When ambient air temperatures are above 40 degrees F cover tops of walls and masonry elements with plastic or canvas at end of workday to prevent water from entering masonry.
- 2. When ambient air temperatures are below 40 degrees F and above 32 degrees F or temperature of masonry units is below 40 degrees F:
 - a. Remove visible ice on masonry units before units are placed in the wall.
 - b. Do not lay masonry units having a temperature below 20 degrees F.
 - c. Heat sand and mixing water to produce mortar temperatures between 40 degrees F and 120 degrees F at the time of mixing.
 - d. Maintain mortar and grout temperatures above freezing until used in masonry.
 - e. Cover tops of walls and masonry elements with weather resistive membrane at end of workday to prevent water from entering masonry.
- 3. When ambient air temperatures are below 32 degrees F and above 25 degrees F or temperature of masonry units is below 40 degrees F:
 - a. Remove visible ice on masonry units before units are placed in the wall.
 - b. Do not lay masonry units having a temperature below 20 degrees F.
 - c. Heat sand and mixing water to produce mortar temperatures between 40 degrees F and 120 degrees F at the time of mixing.
 - d. Maintain mortar and grout temperatures above freezing until used in masonry.
 - e. Completely cover walls and masonry elements with weather resistive membrane at end of workday and keep covers in place for 24 hours.
- 4. When ambient air temperature is below 25 degrees F and above 20 degrees F:
 - a. Remove visible ice on masonry units before units are placed in the wall.
 - b. Do not lay masonry units having a temperature below 20 degrees F.
 - c. Heat sand and mixing water to produce mortar temperatures between 40 degrees F and 120 degrees F at the time of mixing.
 - d. Maintain mortar and grout temperatures above freezing until used in masonry.

- e. Use heat source on both sides of masonry under construction.
- f. Install wind breaks when wind velocity is more than 15 mph.
- g. Completely cover walls and masonry elements with insulated blankets or equivalent protection at end of workday and keep covers in place for 24 hrs.
- 5. When ambient temperature is below 20 degrees F:
 - a. Remove visible ice on masonry units before units are placed in the wall.
 - b. Do not lay masonry units having a temperature below 20 degrees F.
 - c. Heat sand and mixing water to produce mortar temperatures between 40 degrees F and 120 degrees F at the time of mixing.
 - d. Maintain mortar and grout temperatures above freezing until used in masonry.
 - e. Provide an enclosure for the masonry under construction.
 - f. Use heat sources to maintain temperatures above 32 degrees F within the enclosure.
 - g. Maintain masonry temperature above 32 degrees F for 24 hours after construction by enclosure with supplementary heat, electric heating blankets, infrared heat lamps, or other acceptable methods.
- B. Environmental Requirements (**Hot Weather**): Follow the requirements for Hot and Cold Weather Construction. Include the following construction requirements for hot weather procedures:
 - 1. When ambient temperature is above 115 degrees F or ambient air temperature is above 105 degrees F and wind velocity exceeds 8 mph:
 - a. Shade materials and mixing equipment from direct sunlight.
 - b. Maintain sand piles in damp loose condition.
 - c. Provide necessary conditions and equipment to produce mortar and grout having temperatures below 120 degrees F.
 - d. Use cool mixing water for mortar and grout.
 - e. Maintain temperatures of mortar and grout below 120 degrees F.
 - f. Flush mixer, mortar and grout transport container, and mortarboards with cool water before the encounter mortar or grout.
 - g. Maintain mortar consistency by re-tempering with cool water.
 - h. Use mortar within 2 hours of initial mixing.
 - i. Fog spray all newly constructed masonry until damp, at least three times a day until the masonry is 3-days old.
 - 2. When ambient temperature is above 100 degrees F or ambient air temperature is above 90 degrees F and wind velocity exceeds 8 mph:
 - a. Maintain sand piles in damp loose condition.
 - b. Provide necessary conditions and equipment to produce and maintain mortar and grout having temperatures below 120 degrees F.
 - c. Maintain mortar and grout temperatures below 120 degrees F.
 - d. Flush mixer, mortar and grout transport container, and mortarboards with cool water before the encounter mortar or grout.
 - e. Maintain mortar consistency by re-tempering with cool water.
 - f. Use mortar within 2 hours of initial mixing.
 - g. Fog spray all newly constructed masonry until damp, at least three times a day until the masonry is three days old.

PART 2 - PRODUCTS

- 2.1 Manufacturers
- A. Acceptable Manufacturers:
 - 1. Acceptable Manufacturer: County Materials Corporation, 205 North St. P. O. Box 100, Marathon, WI 54448-0100: Tel:715-848-1365: Web: www.countymaterials.com

- 2. Substitutions: Not permitted
- 2.2 Concrete Masonry Units
- A. Concrete Masonry Units General:
 - 1. Provide concrete masonry standard units as indicated and scheduled with face dimensions of 16 inches long by 8 inches high, nominal; 15-5/8 inches long by 7-5/8 inches high, actual, by thicknesses indicated on drawings
 - 2. Provide special masonry units for bond beams, control and expansion joints, and lintels.
 - 3. Hollow and solid load-bearing block: ASTM C-90, normal weight, 125 pounds per cubic foot dry weight minimum.
- B. Architectural Concrete Masonry Units: County Materials Corporation: all colored units and Split face produced with integral water repellant admixture
 - 1. **Split Face**; Manufactured by County Materials Corporation.
 - a. Description: Normal weight, integrally pigmented load bearing unit
 - b. Compliance: ASTM C90
 - c. Coloring: Integral, Through-body coloring
 - d. Water Repellent: Integral Water Repellent
 - e. Color: Selected from manufacturer's standard range
 - f. Color: _____
 - 2. Premier Ultra Burnished; Manufactured by County Materials Corporation.
 - a. Description: Normal weight, integrally pigmented load bearing unit
 - b. Compliance: ASTM C90
 - c. Coloring: Integral, Through-body coloring
 - d. Water Repellent: Integral Water Repellent
 - e. Color: Selected from manufacturer's standard range
 - f. Color:
 - g. Finish: Ground Face
 - 3. **Heritage Collection Designer Concrete Brick**; Manufactured by County Materials Corporation.
 - a. Description: Normal weight, integrally pigmented load bearing unit
 - b. Compliance: ASTM C1634
 - c. Coloring: Integral, Through-body coloring
 - d. Water Repellent: Integral Water Repellent
 - e. Color: Selected from manufacturer's standard range
 - f. Color:
 - g. Facing Texture Style:
 - 1. Smooth
 - 2. Splitface
 - 3. Tumbled
 - h. Style:
 - 1. Blended
 - 2. No Flash
 - 4. **Scored Smooth**; Manufactured by County Materials Corporation.
 - a. Description: Normal weight, integrally pigmented load bearing unit
 - b. Compliance: ASTM C90
 - c. Coloring: Integral, Through-body coloring
 - d. Water Repellent: Integral Water Repellent
 - e. Color: Selected from manufacturer's standard range

	f. Color:
5.	Transplit Block; Manufactured by County Materials Corporation.
	a. Description: Normal weight, integrally pigmented load bearing unit
	b. Compliance: ASTM C90
	c. Coloring: Integral, Through-body coloring
	d. Water Repellent: Integral Water Repellent
	e. Color: Selected from manufacturer's standard range
	f. Color:
6.	Wirecut Block; Manufactured by County Materials Corporation.
	a. Description: Normal weight, integrally pigmented load bearing unit
	b. Compliance: ASTM C90
	c. Coloring: Integral, Through-body coloring
	d. Water Repellent: Integral Water Repellent
	e. Color: Selected from manufacturer's standard range
	f. Color:
7.	Reflection Brick; Manufactured by County Materials Corporation.
	a. Description: Normal weight, integrally pigmented load bearing unit
	b. Compliance: ASTM C1634
	c. Coloring: Integral, Through-body coloring
	d. Water Repellent: Integral Water Repellent
	e. Color: Selected from manufacturer's standard range
	f. Color:
8.	Reflection Stone; Manufactured by County Materials Corporation.
	a. Description: Normal weight, integrally pigmented load bearing unit
	b. Compliance: ASTM C90
	c. Coloring: Integral, Through-body coloring
	d. Water Repellent: Integral Water Repellent
	e. Color: Selected from manufacturer's standard range
	f. Color:
9.	Reflection Grand; Manufactured by County Materials Corporation.
	a. Description: Normal weight, integrally pigmented load bearing unit
	b. Compliance: ASTM C90
	c. Coloring: Integral, Through-body coloring
	d. Water Repellent: Integral Water Repellent
	e. Color: Selected from manufacturer's standard range
40	f. Color:
10.	County Stone; Manufactured by County Materials Corporation.
	a. Description: Normal weight, integrally pigmented load bearing unit
	b. Compliance: ASTM C90
	c. Coloring: Integral, Through-body coloring d. Water Repellent: Integral Water Repellent
	e. Color: Selected from manufacturer's standard range
	f. Color:
	g. Color Style:
	g. Color Style. 1. Blended
	2. Solid
	Z. John

- C. Concrete Thin Veneer Units: County Materials Corporation: all colored units are produced with integral water repellant admixture
 - 1. **Split Face**; Manufactured by County Materials Corporation.
 - a. Description: Normal weight, integrally pigmented load bearing unit b. Compliance: ASTM C90/C129

 - c. Coloring: Integral, Through-body coloring

d. Water Repellent: Integral Water Repellent
e. Color: Selected from manufacturer's standard range
f. Color:
2. Premier Ultra Burnished ; Manufactured by County Materials Corporation.
a. Description: Normal weight, integrally pigmented load bearing unit
b. Compliance: ASTM C90/C129
c. Coloring: Integral, Through-body coloring
d. Water Repellent: Integral Water Repellent
e. Color: Selected from manufacturer's standard range f. Color:
g. Finish: Ground Face
3. Heritage Collection Designer Concrete Brick; Manufactured by County Materials
Corporation.
a. Description: Normal weight, integrally pigmented load bearing unit
b. Compliance: ASTM C90/C129
c. Coloring: Integral, Through-body coloring
d. Water Repellent: Integral Water Repellent
e. Color: Selected from manufacturer's standard range
f. Color:
g. Facing Texture Style:
1. Smooth
2. Splitface
3. Tumbled
h. Style:
1. Blended
No Flash Reflection Brick; Manufactured by County Materials Corporation.
a. Description: Normal weight, integrally pigmented load bearing unit
b. Compliance: ASTM C90/C129
c. Coloring: Integral, Through-body coloring
d. Water Repellent: Integral Water Repellent
e. Color: Selected from manufacturer's standard range
f. Color:
5. Reflection Stone; Manufactured by County Materials Corporation.
 a. Description: Normal weight, integrally pigmented load bearing unit
b. Compliance: ASTM C90/C129
c. Coloring: Integral, Through-body coloring
d. Water Repellent: Integral Water Repellent
e. Color: Selected from manufacturer's standard range
f. Color:
6. Reflection Grand ; Manufactured by County Materials Corporation.
a. Description: Normal weight, integrally pigmented load bearing unitb. Compliance: ASTM C90/C129
c. Coloring: Integral, Through-body coloring
d. Water Repellent: Integral Water Repellent
e. Color: Selected from manufacturer's standard range
f. Color:
7. County Stone ; Manufactured by County Materials Corporation.
a. Description: Normal weight, integrally pigmented load bearing unit
b. Compliance: ASTM C90/C129
c. Coloring: Integral, Through-body coloring
d. Water Repellent: Integral Water Repellent
e. Color: Selected from manufacturer's standard range
f. Color:

- g. Color Style:
 - 1. Blended
 - 2. Solid

2.3 ANCHORAGE AND REINFORCING

- A. Specified in Section 04080
- 2.4 ACCESSORIES
- A. Specified in Section 04090

PART 3 - EXECUTION

3.1 INSPECTION

- A. Prior to the start of masonry construction, the Contractor shall verify:
 - 1. Foundations are constructed with tolerances conforming to ACI 117.
 - 2. Reinforcing dowels are positioned in accordance with Project Drawings.
 - 3. Verify items provided by other Sections of the Work are properly sized and located.
- B. If conditions are not met notify the Architect/Owners Representative.

3.2 PREPARATION

- A. Establish Lines, Levels, and Coursing:
 - 1. Protect lines from disturbance.
 - 2. Use non-corrosive materials in contact with masonry.
- B. Surface Preparation: Prior to placing masonry units remove, loose aggregate or any other materials that would prevent mortar from bonding to the foundation.

3.3. COURSING AND BONDING

- A. Placement: Place masonry units to lines and levels indicated on plans.
- B. Uniformity: Maintain masonry coursing and horizontal joints of uniform width and thickness.
- C. Bond Patterns: Place masonry units in running bond pattern unless otherwise noted on plans.
- D. Course Height: Course one masonry unit and one mortar joint to equal 8 inches (4 inches for ½ high units)

3.4 PLACING

- A. Bed and Head Joints:
 - 1. Joint Thickness:
 - a. Construct 3/8-inch bed and head joints unless otherwise indicated.

- b. Construct bed joint at starting course on foundation not less than ¼ inch and not more than ¾ inch.
- 2. Fill holes not specified in exposed and below grade masonry with mortar.
- Tool head and bed joints concave unless below grade or above ceiling height and to be concealed.
 - a. Use tool with large enough radius that joint is not raked free of mortar.
- 4. Remove masonry protrusions extending ½ inch or more into cells or cavities to be grouted.

B. Unit Placement:

- 1. Lay masonry units with bed and head joints filled from the faces of the units to a distance in not less than the thickness of the face shell.
 - a. Vertical cells to be grouted are aligned and unobstructed openings for grout must be provided in accordance with drawings.
- 2. Keep cavity airspace and weep holes clean of mortar, clean out promptly if mortar falls into cavity airspace or plugs weep holes.
- 3. Remove excess mortar
 - a. Protect wall from mud splatter and mortar droppings.
 - b. Place masonry units such that mortar does not run down the face of the wall or smear the masonry face.
- 4. Adjustments:
 - a. Do not shift or tap masonry units after mortar has taken initial set.
 - b. Where adjustments must be made, remove mortar and replace.
- 5. Protection: Protect wall cavities during construction to prevent rainwater saturation and excessive moisture accumulation.
- 3.5 TOLERANCES: Erect masonry within the following tolerances from specified dimensions:

A. Dimension of Elements:

- 1. In cross-section or elevation: minus ¼ inch, plus ½ inch 2. Mortar joint thickness:
 - a. Bed joints: plus or minus 1/8 inch
 - b. Head joints: plus 3/8 inch to minus 1/4 inch
 - c. Collar joints: plus 3/8 inch to minus 1/4 inch

B. Elements

- 1. Variation from level:
 - a. Bed joints: plus or minus 1/4 inch in 10 feet; plus or minus 1/2 inch maximum.
 - b. Top surface of bearing walls: plus or minus 1/4 inch in 10 feet; plus or minus ½ inch maximum.
- 2. Variation from plumb: plus or minus 1/4 inch in 10 feet; plus or minus 3/8 inch in 20 feet; plus or minus 1/2 inch max.
- 3. True to line: plus or minus 1/4 inch in 10 feet; plus or minus 3/8 inch in 20 feet; plus or minus 1/2 inch maximum.
- 4. Alignment of columns and walls (bottom versus top):
 - a. Bearing: plus or minus 1/2 inch.
 - b. Non-bearing: plus or minus 3/4 inch

C. Location of elements:

1. Indicated in plan: plus or minus ½ inch in 20 feet; plus or minus ¾ inch maximum

- 2. Indicated in elevation: plus or minus ¼ inch in story height; plus or minus ¾ inch max.
- C. Notification: If the above conditions cannot be met, notify Architect/Owner's Representative.

3.6 ANCHORAGE AND REINFORCING

- A. Specified in Section 04080
- 3.7 GROUT PLACEMENT
- A. Specified in Section 04070
- 3.8 CLEANING
- A. In-Progress Cleaning: Clean unit masonry as work progresses within seven days by dry brushing to remove excess mortar and smears before tooling joints, as described in section 3.04.B.3.
- B. Final Cleaning: Clean exposed masonry as follows:
 - 1. Clean masonry before installing windows, door, finished flooring, metal fixtures, hardware, light fixtures, roofing materials and other non-masonry items.
 - 2. If already installed, protect from cleaning solution with polyethylene film or waterproof masking tape.
 - 3. Remove large mortar particles by hand with wooden paddles and non-metallic tools
 - 4. Always test cleaner on sample panel or small area to demonstrate products, procedures and stain suitability of each type of stain
 - 5. Materials: Clean masonry units with the following masonry cleaners:
 - a. For Polished Face, Ground Face, Wall Brick or Smooth Face use:
 - i. Sure Klean Burnished Custom Masonry Cleaner, by Prosoco as per manufacturer's instructions and cleaning procedures
 - ii. MND80 New Masonry Detergent, By EaCo Chem as per manufacturer's instructions and cleaning procedures
 - b. For Split Face, Split-Ribbed and Shot-Blasted use:
 - i. Sure Klean Custom Masonry Cleaner, by Prosoco as per manufacturer's instructions and cleaning procedures
 - ii. MND80 New Masonry Detergent, By EaCo Chem as per manufacturer's instructions and cleaning procedures

3.16 FIELD QUALITY CONTROL

A. Masonry: Specified in Section 01450.

END OF SECTION
