Nature's Quest

Product Manufacturer:

County Materials
Corporation

Date:

2020

Key Products:

Grand Discover™ Pavers,
Grand Vantage™ Pavers,
Vantage™ Pavers, Summit
Stone® Landscape Units

County Materials' Dimensionally Compatible Pavers Offer Limitless Possibilities

Solutions: Dimensionally compatible pavers; custom patio design

When it comes to maximizing outdoor living spaces, every detail counts. These homeowners sought a custom patio design that would add character to their backyard, using a variety of colors and textures. Working with a three-week timeline, contractor, Nature's Quest, relied on readily available products that promote ease and speed of installation.

County Materials' dimensionally compatible pavers were an ideal solution. Designed and manufactured for seamless installations, the paver lines offer limitless possibilities when it comes to combining size modules, textures, and colors. The homeowners worked with Nature's Quest to select pavers, ultimately choosing Grand Discover™ Pavers in Majestic, Vantage™ Pavers in Reflection, and Grand Vantage™ Pavers in Intention to bring their design to life. The pavers' dimensional compatibility facilitated the use of two size modules from two distinct lines, ensuring the contractor was able to fit pavers together to form inlays and banding with ease. Beyond design flexibility, County Materials' pavers offer unmatched performance and beauty with the use of Genesis Face-Mix Technology™. This technology produces pavers with superior durability, and vibrant colors that resist fading and everyday wear, ensuring decades of use and enjoyment.

Continued on page 2.

A seat wall was built using Summit Stone® Landscape Units in Reflection with Vision banding to make the entertainment space more intimate. This feature visually separates the patio from a neighboring yard and creates the illusion of privacy. Summit Stone units are offered in multiple sizes that offer greater design flexibility to make custom landscape projects simpler.

County Materials' readily available dimensionally compatible pavers were essential in keeping the project on schedule. Within three weeks, 700 SF of concrete landscaping products were delivered and installed to meet the homeowners' expectations.
