

CASE STUDY

PROJECT DETAILS

Project Name:
Hunter Drive Residence

Location:
Wayzata, MN

General Contractor:
Outdoor Innovations

Product Manufacturer:
County Materials Corporation

Date:
2020

Key Products:
Grand Discover™ Pavers,
Elements™ Paving Stones

Breathtaking Pool Deck Utilizes Grand Discover™ Pavers and Elements™ Paving Stones to Create a Lasting Statement

Solutions: Genesis Face-Mix Technology™ preserves beauty and prolongs service life; luxury pool deck

Whether it's the calming presence of Grand Discover™ Pavers or the sophisticated shape of Elements™ Paving Stones, you cannot help but marvel at the beauty of this breathtaking pool deck. These material choices were inspired by the natural stone retaining wall that separates this entertainment space from the rest of the yard. To complement both the natural stone and the home's elegant façade, the pool deck needed to be natural in color and subtle in texture. The homeowners worked with Outdoor Innovations to find and implement a solution to transform their outdated pool deck into a contemporary oasis.

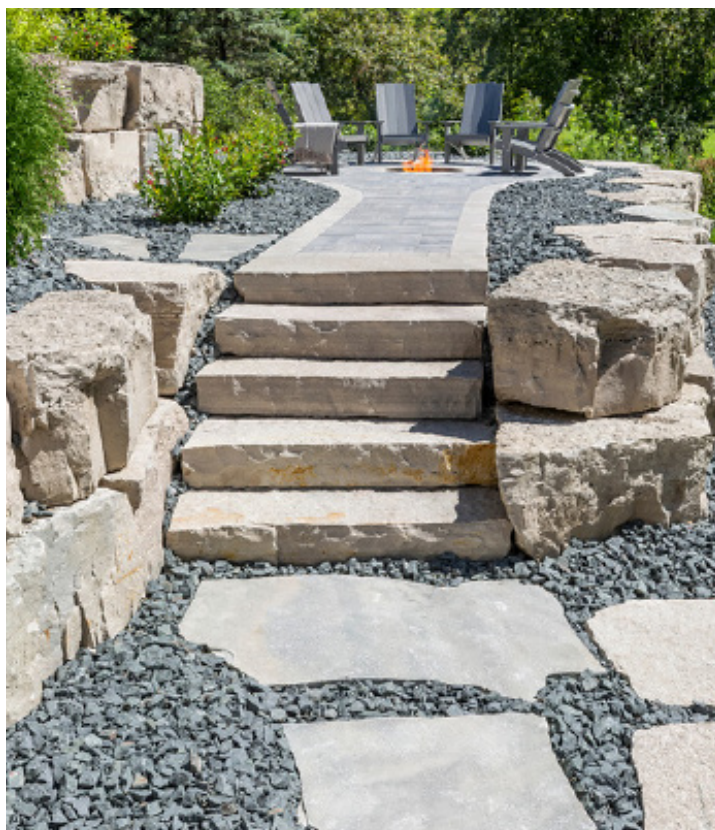

Familiar with the caliber of County Materials' diverse line of pavers, Outdoor Innovations specified Grand Discover Pavers and Elements Paving Stones for their elevated aesthetics and rugged durability. These pavers are distinguished for their built-to-last, ultra-modern design that relies on Genesis Face-Mix Technology and sophisticated profiles to deliver exceptional results. Grand Discover units' large modular size increased the project's speed-of-installation and afforded greater design flexibility, which was expressed by changing the direction of the pavers to accentuate the Elements Paving Stone inlay. Elements pavers further refine the design with their slightly chamfered edges and uniform shape that embody the fine cut of lavish jewels for a feeling of ultimate luxury.

Continued on page 2.

County Materials manufactures a diverse line of pavers that enhance beauty and resist wear using Genesis Face-Mix Technology, comprised of vibrant color pigments and high-strength concrete mix. With this technology, County Materials achieves a smoother, stronger, and more vibrant result than that of alternative materials. Pavers manufactured with Genesis Face-Mix Technology are an appealing choice for high-traffic areas with exposure to the elements, such as this pool deck.

Within three weeks, over 2,300 SF of concrete pavers were installed to modernize this outdoor living space. County Materials' readily available products and flexible delivery schedule aided in the timely completion of this project. As a result, the homeowners were able to start enjoying their new backyard oasis shortly after the project's start date.
