# Installation Options for Field Applied Concrete Thin Veneers

Decorative thin veneers have been transforming residential and commercial construction markets. With our large selection of colors, sizes and textures, County Materials manufactures beautiful and highly durable thin veneers that combine design elegance with installation simplicity.

Thin veneers are easy-to-apply and can be installed almost anywhere, often providing substantial cost savings. They offer the freedom to create customized interior and exterior applications without having to worry about load-bearing walls or foundations; typically a brick ledge is not required. And, thin veneers can be used for walls where full bed depth units would not be practical. Often, thin veneer wall panel systems shorten construction time.

## Installation Options:

- Thin set system
- Thick set system
- Prefabricated metal panel system
- Prefabricated foam panel
